

KAIROVA / CS110 / WEEK 3 · Comedy

Expedition Mission Receipt

DESTINATION / MISSION

Civic Archive Dome / Secure

GENRE

Comedy

CHARACTER / ROLE

An / Signal analyst

CREATION TYPE / ORIGIN

Person / Kairova archive district

DEFINING FEATURE

Always carries a broken scanner and jokes when nervous

STRENGTH 1

Pattern recognition

PAIRED LIMITATION 1

Unusual cases can be misclassified

STRENGTH 2

Night vision

PAIRED LIMITATION 2

Bright light overwhelms the sensor

AUDIENCE

The Kairova Civic Records Recovery Team needs a clear way to identify the original entry records and remove the duplicates.

PURPOSE

The report explains how to find the duplicated records, protect the original files, and prevent the system from copying them again.

MEANING

Success protects the citizens' information and gives the next response crew a clear process they can trust.

DISCOVERY

An discovered that every duplicate had the same timestamp and scanner error code. The broken scanner's retry mode was copying each entry whenever the archive lights flickered.

PROBLEM

The records looked almost identical, the scanner was unreliable, and the bright emergency lights interfered with An's night vision.

RESPONSE

An used pattern recognition to separate the original records from the copies. Then An turned off the scanner's retry mode, removed the duplicates, and tested the system again.

OUTCOME

The original records were restored and the archive system returned to normal. An left a reliable recovery guide for the next crew and joked that the scanner had finally stopped making new friends.

SEEK AND AAA WORKBOOK EVIDENCE

SEEK_AAA_Workbook_Evidence.pdf

PEER TEST

A classmate tested all four scenes. All images displayed correctly, the text was readable, and the Previous and Next buttons worked. No correction was needed.

PRODUCTIVE STRUGGLE

I typed “git add.” without a space, so Git reported that no changes were added to the commit. I corrected the command to “git add .”, committed the project, published it to GitHub, and verified the website.

NEXT TEST

Open the published website in a private window, test all four scenes with the keyboard, and confirm that every image remains readable at a narrow browser width.

CODE MAP SELF-CHECKS

7 of 7 marked complete by learner

Learner-entered record. Canvas remains the official submission, feedback, and grade record.
